

## QUALITY & ENVIRONNEMENT POLICY

Emball'Iso France is a company based on technological innovation. Since its creation, I have always tried to develop "quality" products and services that are as close to our customers' needs as possible and environmentally friendly.

"**Quality products and services**" means that they meet the commitments made to customers, suppliers and also internal objectives

"**Environmentally friendly**" means that they take into account the regulatory requirements and seek to reduce its environmental impact

This is the reason why we permanently work on continual and measurable improvements, such as:

- promote, develop and improve processes, products and services related to customer requirements, market needs and environmental requirements
- Comply with regulatory requirements and requirements for cost, performance, quality and timeliness throughout the process,
- Implement in time, effective preventive and corrective actions,
- Ensure that all employees are involved in the achievement of corporate objectives including quality and environmental objectives
- Achieve sufficient profitability to invest in the future.

Certified ISO 9001, my ambition is to maintain this level of internal organization and provide methodological support to subsidiaries to achieve a uniform organization across the Emball'Iso group and to boost its competitive performance.

Another objective is to maintain and develop an environmental policy for the entire group, in line with the spirit of the ISO 14001 standard.

**In stating these objectives**, I am committing to supporting our QUALITY and ENVIRONMENTAL initiatives,

- With the help of the quality manager and environment managers appointed for this purpose,
- And to providing the necessary technical, financial and organizational resources.

Pierre CASOLI  
President
